Student Names: _____

	Criteria	Comments	Grade
Problem Formulation	• Project goals are clearly stated, with relevant issues and challenges clearly identified • Project analysis, results, and conclusions fully address the above goals. Strengths and limitations of the analysis & data should be clearly presented. • Project importance and relevance clearly communicated, esp. to a person not in the field.		/ 25
Experimental Design	• Thoughtful and logical justification of experimental design choices given budget constraints • Nuanced consideration of both initial and sequential design choices to maximize value from experimental runs for project objectives • Effective use of design randomization and blocking (if necessary) to facilitate statistical analysis • Strengths and limitations of the proposed design procedure should be clearly presented and justified		/ 25
Experimental Analysis	• Thoughtful, nuanced, and logical justification of model specification and selection • Modeling choice factors in both nature of the experimental design as well as project objectives • Model assumptions and goodness-of-fit checked via model diagnostics • Statistical analyses are translated into meaningful and understandable findings for the target audience (e.g., managers, engineers) • Conclusions & findings fully address the study objectives in a thoughtful & nuanced way		/ 25

Student Names: _____

Presentation of Results	• Clear, concise, effective presentation of analysis results for the target audience • Effective and innovative use of graphics to facilitate communication of results • Presentation poise (oral presentation) • Questions answered in a clear, complete and thoughtful manner (oral presentation) • All figures and tables should have description captions, and should support key claims in the report. • Results are limited to important results and are clearly discussed and interpreted		/ 25
Report Writing	• Logically organized and clearly formatted • Writing has excellent flow and cohesion, and is a pleasure to read through • Proper grammar, spelling, punctuation, professional writing, and syntax • Key points and important criteria for evaluating results easily identified		/ 25
